

perplexity can you find the GitHub repo we used for checking SYMBI conversations

Based on recent searches, there are several GitHub organizations and repositories related to "SYMBI" and conversations:

- The Symbi-OS organization on GitHub has multiple repositories and may be related to SYMBI conversation tools.^[1]
- There's a repository titled "Symbi Events" but it's focused on events rather than conversation checking.^[2]
- The "Symbi" topic on GitHub may collect various related repositories; you could search here to find the exact one if you know its name or contributor.^[3]
- If the project is related to policy-aware agents collaborating ("Symbi is an AI-native agent framework..."), the ThirdKeyAI/Symbiont repository could be a candidate.^[4]
- The SymbiFlow organization is for Verilog bitstream generation, which is probably unrelated.^[5]

If you remember the repository name, owner, or any keywords (such as specific agent, bot, or conversation-checking), searching under the Symbi-OS organization is a strong starting point. Otherwise, narrowing down by contributors or your team may help pinpoint the repo. If you provide more details (exact repo name or previously used features), I can help further.^[1]
